

PDF Chatbot API Documentation

Base URL:

`http://localhost:8000`

Endpoints

1. Upload PDF

- **URL:** `/upload-pdf`
- **Method:** `POST`
- **Description:** Uploads a PDF file, extracts text, splits into chunks, and creates a FAISS index for retrieval.

Request

- **Content-Type:** `multipart/form-data`
- **Body:**
 - `file`: (required) PDF file

Example

```
curl -X POST http://localhost:8000/upload-pdf \  
-F "file=@sample.pdf"
```

Response

```
{  
  "filename": "sample.pdf",  
  "chunks": 128,  
  "status": "Index created successfully"
```

```
}
```

2. Chat with PDF

- **URL:** `/chat`
- **Method:** `POST`
- **Description:** Sends a user query. The system retrieves relevant PDF chunks and generates an answer using the LLM.

Request

- **Content-Type:** `application/json`
- **Body:**

```
{  
  "question": "What does the Sales Assistant Agent do?"  
}
```

Response

```
{  
  "answer": "The Sales Assistant Agent identifies leads, follows up  
with clients, and recommends upselling opportunities. Cost is $5,500  
one-time and $550/month maintenance."  
}
```

Error Handling

- **400 Bad Request** → Invalid input (e.g., non-PDF upload).

```
{ "error": "Invalid file format. Only PDF allowed." }
```

- **500 Internal Server Error** → Unexpected backend error.

```
{ "error": "Something went wrong while processing your request." }
```
